Ranjit Sapkal

Backend Developer

Pune, India | +91 7083512623 | ranjitsapkal20@gmail.com | linkedin.com/in/ranjit-sapkal

PROFESSIONAL SUMMARY

Backend Developer with 3+ years of experience designing, developing, and maintaining scalable backend applications using Node.js, NestJS, Express.js, and MySQL. Experienced in building RESTful APIs, implementing microservices architecture, and designing efficient database schemas. Hands-on experience with authentication and authorization using Keycloak, database optimization, Elasticsearch, Kibana, and BullMQ for background job processing. Strong understanding of asynchronous programming, API security, application performance, and business workflow implementation. Experienced with CI/CD pipelines and application integration.

TECHNICAL SKILLS

Backend Development: Node.js, NestJS, Express.js, RESTful APIs, Microservices Architecture, Middleware, API Validation, Error Handling, Asynchronous Programming

Authentication & Authorization: Keycloak, JWT, Access Tokens, Refresh Tokens, Role-Based Access Control (RBAC), API Security

Databases & Search: MySQL, SQL, MongoDB, Elasticsearch, Database Design, Query Optimization, Indexing

Background Processing: BullMQ, Redis, Background Jobs, Asynchronous Task Processing

Logging & Monitoring: Kibana, Elasticsearch, Application Log Analysis, Error Monitoring

DevOps & CI/CD: Docker, Git, GitHub, CI/CD Pipelines, Automated Testing, Build Automation, AWS (EC2, S3 - Basic)

Tools: Postman, OpenAPI/Swagger, npm, Yarn, Cursor, Antigravity

Core Concepts: JavaScript (ES6+), Promises, Async/Await, OOP, Data Structures & Algorithms, Agile/Scrum

PROFESSIONAL EXPERIENCE

Software Developer | Product Unit January 2023 - Present

HiddenBrains Infotech, Pune

- Developed and maintained scalable backend services using Node.js, NestJS, Express.js, and MySQL to support business applications, ERP workflows, and system integrations.
- Designed, developed, and maintained 100+ RESTful API endpoints with business logic, data validation, error handling, and database integration.
- Implemented authentication and authorization using Keycloak and JWT, supporting secure API access and role-based access control.
- Designed relational database schemas and optimized SQL queries, indexing, and data-processing workflows to improve application performance.
- Worked with microservices architecture and third-party integrations to build reliable and maintainable backend systems.
- Implemented background job processing using BullMQ and Redis to handle asynchronous tasks and improve request-processing efficiency.
- Integrated Elasticsearch and Kibana for application log analysis, search capabilities, and troubleshooting.
- Contributed to CI/CD pipelines, automated testing, and build processes to improve deployment reliability.
- Investigated production issues, improved API performance, and collaborated with cross-functional teams to deliver reliable backend solutions.

KEY PROJECTS

MRS PRODUCTION CONTROL Oct 2023 - Present

Node.js, Express.js, MySQL, REST APIs

- Developed and maintained 100+ RESTful APIs for production management modules: BOM, production orders, batch processing, material requests, inventory consumption, quality tracking, and batch costing.
- Designed and optimized MySQL schemas, relational mappings, and SQL queries to manage production records, inventory movements, and complex business workflows.
- Implemented end-to-end backend workflows integrating production orders, batch creation, material requests, material consumption, and batch cost calculations.
- Implemented API validation, centralized error handling, and role-based access control for secure and reliable backend operations.
- Optimized SQL queries and processing logic to improve API response times for frequently accessed operations.
- Integrated backend services with inventory and other business modules to maintain data consistency across production workflows.

APPLICATION HUB Jan 2025 - Present

Node.js, NestJS, Express.js, MySQL, Elasticsearch, Kibana, BullMQ, Redis

- Developed backend services for a centralized application integration platform supporting multiple connectors and third-party integrations.
- Designed RESTful APIs for connector management, library uploads, application configuration, and data synchronization between internal systems.
- Designed MySQL schemas for application metadata, connector configurations, and synchronization logs to improve data integrity and traceability.
- Implemented asynchronous background processing with BullMQ and Redis to handle synchronization tasks efficiently.
- Integrated Elasticsearch and Kibana for log analysis, monitoring, and troubleshooting integration failures.
- Implemented synchronization status tracking, error handling, and failure logging to improve reliability of integration workflows.
- Implemented secure API access and authentication mechanisms to protect integration services.

API GATEWAY MANAGEMENT DASHBOARD Jan 2026 - Jun 2026

Node.js, Express.js, MySQL, Kong API Gateway, REST APIs

- Developed backend services to manage Kong API Gateway resources, including services, routes, consumers, and authentication configurations.
- Integrated with the Kong Admin API to automate gateway configuration and API resource management.
- Configured gateway security features, including key authentication, rate limiting, and access control policies.
- Designed MySQL structures to maintain gateway configuration records and API resource mappings.
- Built backend workflows for API onboarding and centralized API resource management, reducing manual gateway configuration through automation.

EDUCATION

B.E. in Electronics and Telecommunications Jun 2019 - Mar 2023

SVPM College of Engineering, Malegaon, Baramati
